Application of Trichoderma harzianum for control of the same pests, Exocarpos paysonii Pohse (Exocarpos lucidus):

The use of Trichoderma harzianum is effective in the control of plant diseases. It is a non-pathogenic fungus that produces antibiotics and enzymes that help in the breakdown of plant diseases. The fungus is also able to suppress the growth of other fungi and bacteria, which makes it a useful tool in the control of plant diseases. In addition, Trichoderma harzianum is able to colonize the roots of plants and help in the development of healthy plants. In conclusion, the use of Trichoderma harzianum is an effective and environmentally friendly method for the control of plant diseases.
