A comparative study of life skills between philosophy and non-philosophy students

M. Farmahini Farahani, (Ph.D), M. Sobhaninejad, (Ph.D) & F. Pidad, (M.A)

Abstract: This study compared life skills among students studying philosophy and other fields in the humanities. In this descriptive-comparative study, 90 philosophy students and 49 non-philosophy students were involved. The questionnaire of students' life skills was initially developed and validated by the researchers for the first time in Iran. Results showed no difference between students concerning skills related to physical and psychological health, work, goals, self-awareness, and decision making. However, philosophy students significantly demonstrated higher level of skills in areas of interpersonal relationships, problem solving, critical thinking, and citizenship. No difference was found between sexes. Nevertheless, in non-philosophy group women ranked higher than men on critical thinking and job related skills.
